Annotated list of the lepidopterological taxa in the info-system of the Cesa Part I

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: Annotated list of the lepidopterological taxa in the info-system of the Cesa - Part I. Cent. ent. Stud., *Memoirs* 7: 1-4792, 1 Tab.

In this study, about 25-30% of the contents of the database files in the info-system of the Cesa are listed. Totally, 9181 genus group names, and 94618 species group names of the Lepidoptera are given with synonyms, and distributional information as codes. Original references are also added to 18909 taxa. Similarly, bionomic information are given for 5761 taxa. Totally, 9328 publications used in these database files are listed. Nomenclaturally, one new subgenus name, *Hecqia* in the genus *Euphaedra* Hbn (*Argynnidae*), one new genus name, *Muhabbetkemalia* (*Psychidae*), one new species name, *Furcula schintlmeisteri* (*Notodontidae*) are proposed. Taxonomically, one new subgenus, *Jseppia* is established in the family *Pyralidae*.

Key words: list, bibliography, nomenclature, new name, *Euphaedra*, *Jseppia*, *Muhabbetkemalia*, *Furcula schintlmeisteri*, *Argynnidae*, *Psychidae*, *Pyralidae*, *Notodontidae*, *Lepidoptera*.

Several independent database files on the World Lepidoptera have been preparing by the first author, since 1998. Among them, the taxonomical and faunistical data submitted here as a list of more than 100000 lepidopteran taxa hitherto personally typed into his database files. It has never been argued to give here a complete list of any regional fauna. On the contrary, giving an idea of the present informative situation, and sharing his personal basic collection of information on the Lepidoptera diversity with all of the readers are intended. Certainly, the first author cannot complete this task within the 10-15 years in the future – possibly the rest of his active studying lifetime. However, it is hoped that an update of this list may be possible after 3-4 years.

In the present list, due to the technical problems, only 25-30% of the total information on the taxonomic and faunal database files can be filtered. The rest of the information and the updated list will be prepared for the coming parts.

Brief numerical evaluations of the present study are given below (**Table 1**).

Table 1 – Numerical evaluations of the lepidopterological taxa on the selected topics, used in this study.

A- Number of the genus group names, **B**- Number of the species group names, **C** – Number of the genus- and species group names containing synonymous information, **D** - Number of the genus- and species group names containing original reference, **E** - Number of the genus- and species group names containing distributional information as codes, **F**- Number of the genus- and species group names containing bionomic information (especially larval food-plants).

group\values	A	B	C	D	E	F
Butterflies	1316	26517 (10115 spp. + 16402 sspp.)	27485	7878	26195	1288
Moths	7865	68101 (61335 spp. + 6766 sspp.)	75662	11031	70330	4473
Total	9181	94618	103147	18909	96525	5761

At the end of this study, totally 9328 publications used in these database files are listed alphabetically.

New Nomenclatural Acts in this study

Argynnidæ

***Euphaedra (Hecqia)* Koçak & Kemal (nom. nov.)**

<http://zoobank.org/urn:lsid:zoobank.org:act:DB8CC982-2821-4FDD-98E9-E294AAC56C31>

This homonymy case has already been seen by the authors in 2008, and placed in the database file, but it has not been published so far.

In 1985, Hecq proposed the name *Neophronia* (Lambillionea 85 (1/4): 7) as a subgenus of *Euphaedra* Hübner, [1819]. The subgenus *Neophronia* Hecq is currently used at a subgenus level. Unfortunately, this name cannot be used as valid, as it is junior homonym of *Neophronia* Saxena, 1968 (Zool. Anz. 179: 473) [*Vermes (Cestoda)*].

We propose here a replacement name ***Hecqia*** (nom. nov.) for *Neophronia* Hecq, 1985 nec Saxena, 1968. Type-species: *Romaleosoma neophron* Hopffer, 1855 (Ber. Verh. Akad. Berlin 1855: 640).

This new subgenus name is dedicated to the author of the preoccupied name.

Psychidæ

***Muhabbetkemalia* Koçak (nom. nov.)**

<http://zoobank.org/urn:lsid:zoobank.org:act:39351FA7-D664-41E8-A3F5-3D1AE48D2F12>

Psomocolax Das, 1956 (Ann. Mag. nat. Hist. (12) 9: 526) nec *Psomocolax* Peters, 1929 (Proc. biol. Soc. Washington 42: 122 (Aves)).

This homonymy case has been seen by the authors. Koçak & Kemal (2010, Cesa News 60) listed "*Muhabbetkemalia katani* (Das, 1956)" on page 143, nr. 3354.

As a genus name, ***Muhabbetkemalia*** is proposed here as nomen novum for *Psomocolax* Das, 1956 nec Peters, 1929, as the name *Psomocolax* Das, 1956 cannot be used validly, due to the junior homonymy, according to the Homonymy Rules of the ICZN.

Type-species: *Psomocolax katani* Das, 1956.

Pyralidæ

***Conchylodes (Jseppia)* Koçak & Kemal (subgen. nov.)**

<http://zoobank.org/urn:lsid:zoobank.org:act:0D66B58B-90F3-4538-AC34-D71721E3829A>

Type-species: *Phalaena zebra* Sepp, 1850, by original designation.

The genus *Conchylodes* was described by Guenée (1854, [in] Boisduval & Guenée, Hist. nat. Ins., Spec. gén. Lépid. 8: 288). Type-species: *Lypotigris diphteralis* Geyer, 1832, by subsequent designation by Hampson (1898, Proc. zool. Soc. Lond. 1898: 674).

The current classification of the species of *Conchylodes* is, in fact, based upon Hampson's classification (loc. cit.). Hampson divided *Conchylodes* into two sections, based upon the following features: Sect. I. Fore wing with vein 7 curved and approximated to veins 8, 9. This section contains: *diphteralis* Geyer (type), *nolckenialis* Sn. (type), *hebraealis* Gn., *salamisalis* Druce, and *bryophilalis* Hmps. Sect. II. Fore wing vein 7 straight and well separated from veins 8 and 9. This section contains *zebra* Sepp, *striginalis* Gn., *argentalis* Cr., *concinna* Hmps., *platinalis* Gn., *ovulalis* Gn. and *hedonialis* Wlk.

New attempt was made since Hampson's classification in 1898. Moreover, Hampson's classification is currently overlooked by the authors.

We see Hampson's two divisions and their diagnostic characters significant. The first group is currently named by nominate *Conchylodes* Guenée with its synonym *Ledereria* Snellen. But the second group species under the Hampson's Sect. II, remains unnamed. Therefore, it is here named as ***Jseppia*** at the subgenus level with the diagnostic features defined by Hampson as Sect. II (see above). The type-species is designated here as *Phalaena zebra* Sepp, 1850 (Natuurlijke Historie van Surinaamsche Vlinders: 221, pl. 99 from French Guiana, Cayenne).

We dedicate of this new subgenus to J. Sepp, author of the type-species, *Phalaena zebra*, at the same time, the author of the monumental work on the Lepidoptera of Surinam between 1828 and 1855.

Notodontidae

***Furcula schintlmeisteri* Koçak & Kemal (nom. nov.)**

<http://zoobank.org/urn:lsid:zoobank.org:act:DEF210AB-61E7-478B-8802-1B80DD915BDD>

Brandt described *Cerura turbida* in 1938 (Ent. Rdsch. 55: 574, pl.4 fig.6) from Iran (Fars). But, this name cannot be used validly, as it is junior primary homonym of *Cerura turbida* Walker, 1865 (List Specimens lepid. Colln Br. Mus: 407) (ICZN, Art. 57.2, on primary homonymy). Therefore, we propose here a replacement name ***Furcula schintlmeisteri*** (nom. nov.) for *Cerura turbida* Brandt, 1938 nec *Cerura turbida* Walker, 1865 in the currently used genus *Furcula* Lamarck, 1816.

The new species name is dedicated to Dr. Alexander Schintlmeister, a well-known specialist on the World Notodontidae.
